**IoE -TRANSLATIONAL RESEARCH INITIATIVE**  
**Inter Institutional Research Clusters (IIRC)**  
**To Promote Translational Research**

The IoE aims to create vibrant research clusters by bringing together UoH faculty members and national and international experts onto a common platform to translate fundamental discoveries into results that benefit society at large. This is not a research call that invites proposal to work on a basic research question. The creation of IoE Inter Institutional Research Clusters (IIRC) is primarily to translate basic research into tools that resolve a complex problem hampering humans from leading a healthy, peaceful and harmonious life. The proposals need not revolve around human/animal health alone, they can simply be a process that intends to develop a drug/sustenance of industry/environment or they can be an intense cross-disciplinary activity that brings socio-economic benefits/address an emotional issue that affects the pluralism of multilingual society. Visual arts that bring together cross-cultural art forms and highlight the values of under-represented sections/or proposals that take Indian art forms across the globe are most welcome. Clusters that bring cross disciplines such as humanities/computer science/folklore, etc. to develop tools that promote social harmony among various ethnic groups of a multilingual society are most welcome. The IoE will fund activities of a cluster for an initial period of **two years** and support only those clusters that have well-defined plans for sustaining beyond the tenure of IoE. IoE clusters ultimately should end-up become national/global entities, known across peers for performing the translational activity. Projects are rigorously reviewed at the end of two years. ONLY those that look promising and poised for significant achievements will be renewed for the next cycle of three years, NOT exceeding IoE duration. All such projects are COTERMINUS with IoE duration.

**WHO CAN APPLY:**

1. The call is open to all faculty members of UoH. The Project Investigators should identify the problem and problem driven interdisciplinary groups should be formed by drawing investigators across the schools/departments/centers. If the required expertise is not available with UoH faculty, the investigating team can propose to invite scholars from outside UoH. Researchers/technocrats/scientists working in other national research labs/institutes/universities are welcome to partner with the UoH investigating team. If adequate expertise is not available in the country, the team can invite scholars working in an international organizations /university. Partnering groups MUST have the strength of complementarity that is clearly visible. Therefore, choice of groups expertise is crucial. The complementarity between groups is determined solely by their established track-record, NOT on future presumptive strengths. Out-of-box ideas that are significant will be selected in this funding scheme.
2. Each cluster should have an interdisciplinary research team representing at least three different schools and team should be headed by a coordinator. Funding will be made available to the UoH faculty only through the cluster coordinator. Travel/subsistence allowances to the visiting faculty and UoH team visiting collaborating laboratory should be clearly mentioned in the budget.
3. The proposal should be innovative and should contain a clearly defined TRANSLATIONAL component. Routine, exploratory proposals and proposals simply

intended to collect data/ field works are not encouraged. Projects without a defined and important TRANSLATIONAL GOAL is not eligible in this funding scheme.

4. The investigating team should have generated sufficient basic information and should form basis to the proposed translational activity.
5. The project proposals should ideally fall within the theme of the 5 IoE clusters. The details of the clusters can be found in the IoE website.
6. The Project Coordinator/Investigators should be an established researcher with an international standing/recognition in the proposed cluster activities. She/he should have completed at least FIVE years of active service in UoH and should have at least five years of service as permanent faculty member remaining, to achieve sustenance and to take the cluster activities to a logical end. However, such service conditions are not applicable to the investigators from other institutions but they should be active researchers affiliated to National/international institutions/universities.
7. Projects that involve human subjects or animal experimentation etc., must necessarily follow institutional ethical clearance guidelines strictly.
8. Interinstitutional benefits accruing from the projects such as publications and patents etc., must follow standard interinstitutional agreement guidelines through an MOU.
9. IoE and UoH must be DULY acknowledged wherever funding benefits are publicized.
